

Travel Tracking for all Concur Travel Bookings

A3M Global Monitoring integrates with Concur Travel, helping your employees to travel more secure.

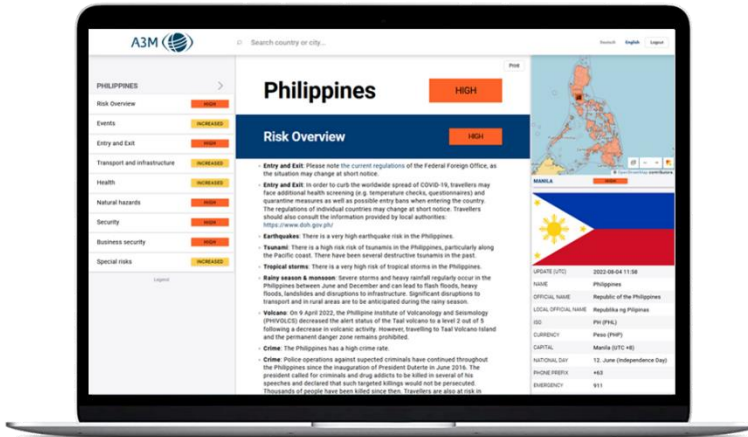

Be prepared – act timely and swiftly

Only if you know where your employees are you can ensure their safety in the best possible way.

Your booking data from Concur Travel are imported and displayed in the Global Monitoring System. This enables you to locate and inform your employees in the event of an emergency.

Your benefits from our solution

- Business travellers can be located within seconds in the system via their flight or hotel details and geo-referenced in a map.
- A3M's Travel Analysts evaluate and provide safety-related information worldwide in form of Travel Alerts and comprehensive Country Dossiers with recommendations for action.
- In this way, employees can be informed immediately about potential dangers and risks - before, during and after their business trip.
- According to your travel risk policy, you can receive a notification once a booking to a high-risk country occurs.

Country Information

Immediately after a booking, a detailed Country Dossier is automatically sent via email to the employees so that they can prepare for their trip accordingly.

You can set rules for the dispatch depending on the risk level of the respective country which A3M classifies from level 1 to 5 or on your own risk level ratings.

Travel Alerts

You can configure the automatic dispatch of Travel Alerts in case of an emergency and define corresponding rules based on the event category, the event level from 1 to 5, the region or country.

As soon as an event matches the defined rules, travelers and/or responsible persons will be automatically informed via email and/or SMS.

We keep an eye on the world and warn you of dangers worldwide

A3M offers the most effective early warning, information and communication systems for the protection and safety of leisure travelers and employees on business trips and international assignments. Due to the impact of dangers and security risks worldwide, the topics of travel security and crisis management are becoming increasingly important. Political unrest, terrorism, strikes, hurricanes, tsunamis, earthquakes, epidemics, crime, etc. can have devastating effects. With our Global Monitoring System and the solutions Country Information, Destination Manager, Travel Tracking, Travel Alerts and Global Monitoring App, we support you in your duty of care and information obligation. We also offer selected crisis management services, medical and security assistance. Global Monitoring was named the industry standard in crisis management by the German Travel Association (DRV).
